Linguistic AI empowering transformation in automotive

André Schlotz, VP Global Automotive & Manufacturing Solutions

Brussels, 24 June 2019

59
offices

£323M
annual revenue

Founded in 1992

Publicly traded company (LSE:SDL)

SDL powers customer experience for **90 of the top 100** global brands

4,100+
employees worldwide

4,500
enterprise customers

39
countries

World-leading Innovative Translation Management Technology

75% of the global localisation supply chain use SDL translation software

30+ BILLION words translated every month by SDL language services and technology

1,300+ In-house Translators and 15,000 Freelancers

Enabling companies to communicate in **180+** languages

Multi-Dimensional Transformation of the Automotive Industry

FROM

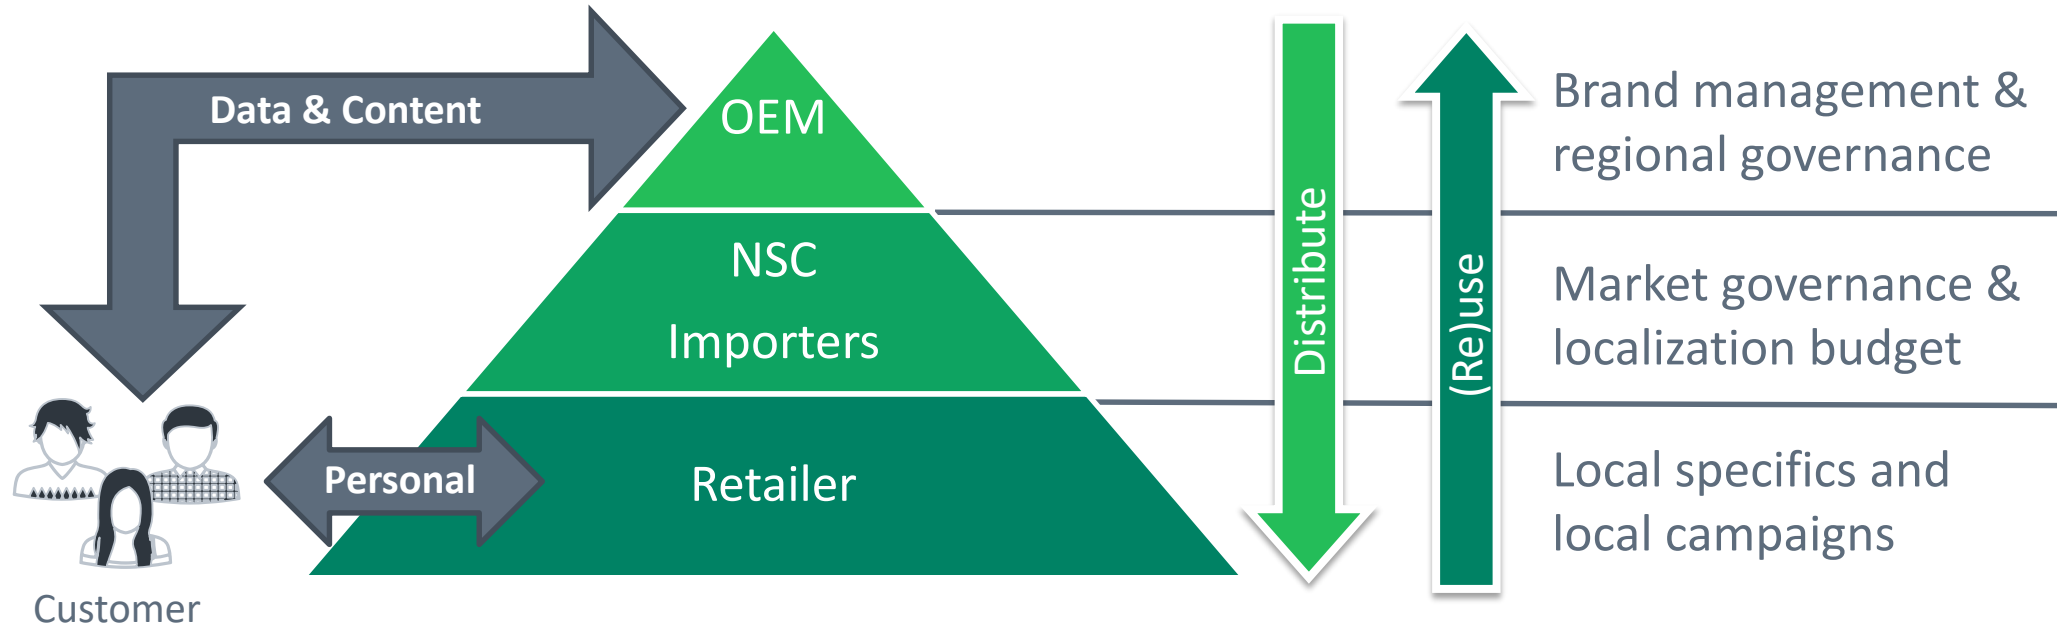

- selling cars
- producing cars
- device/hardware driven
- dealer managed
- gas/diesel/hybrid
- human-driving

TO

- ... providing mobility services
- ... managing an IoT platform with connected devices
- ... services and software driven feature and functions
- ... OEM managed customer relationships
- ... electric/hydrogen
- ... autonomous-driving

... Impacting Content and Translation Mgmt. Governance

The connected vehicle and its backend-services establish a direct relationship of the OEM with the Customer.

The future Digital Experience needs to be Data-Driven with the OEM acting as a **Data Broker** and **Content Service Provider** across the Sales and Service Distribution Chain.

A Data-driven Content Distribution Chain . . .

Removes friction
and redundancies
across the
distribution chain

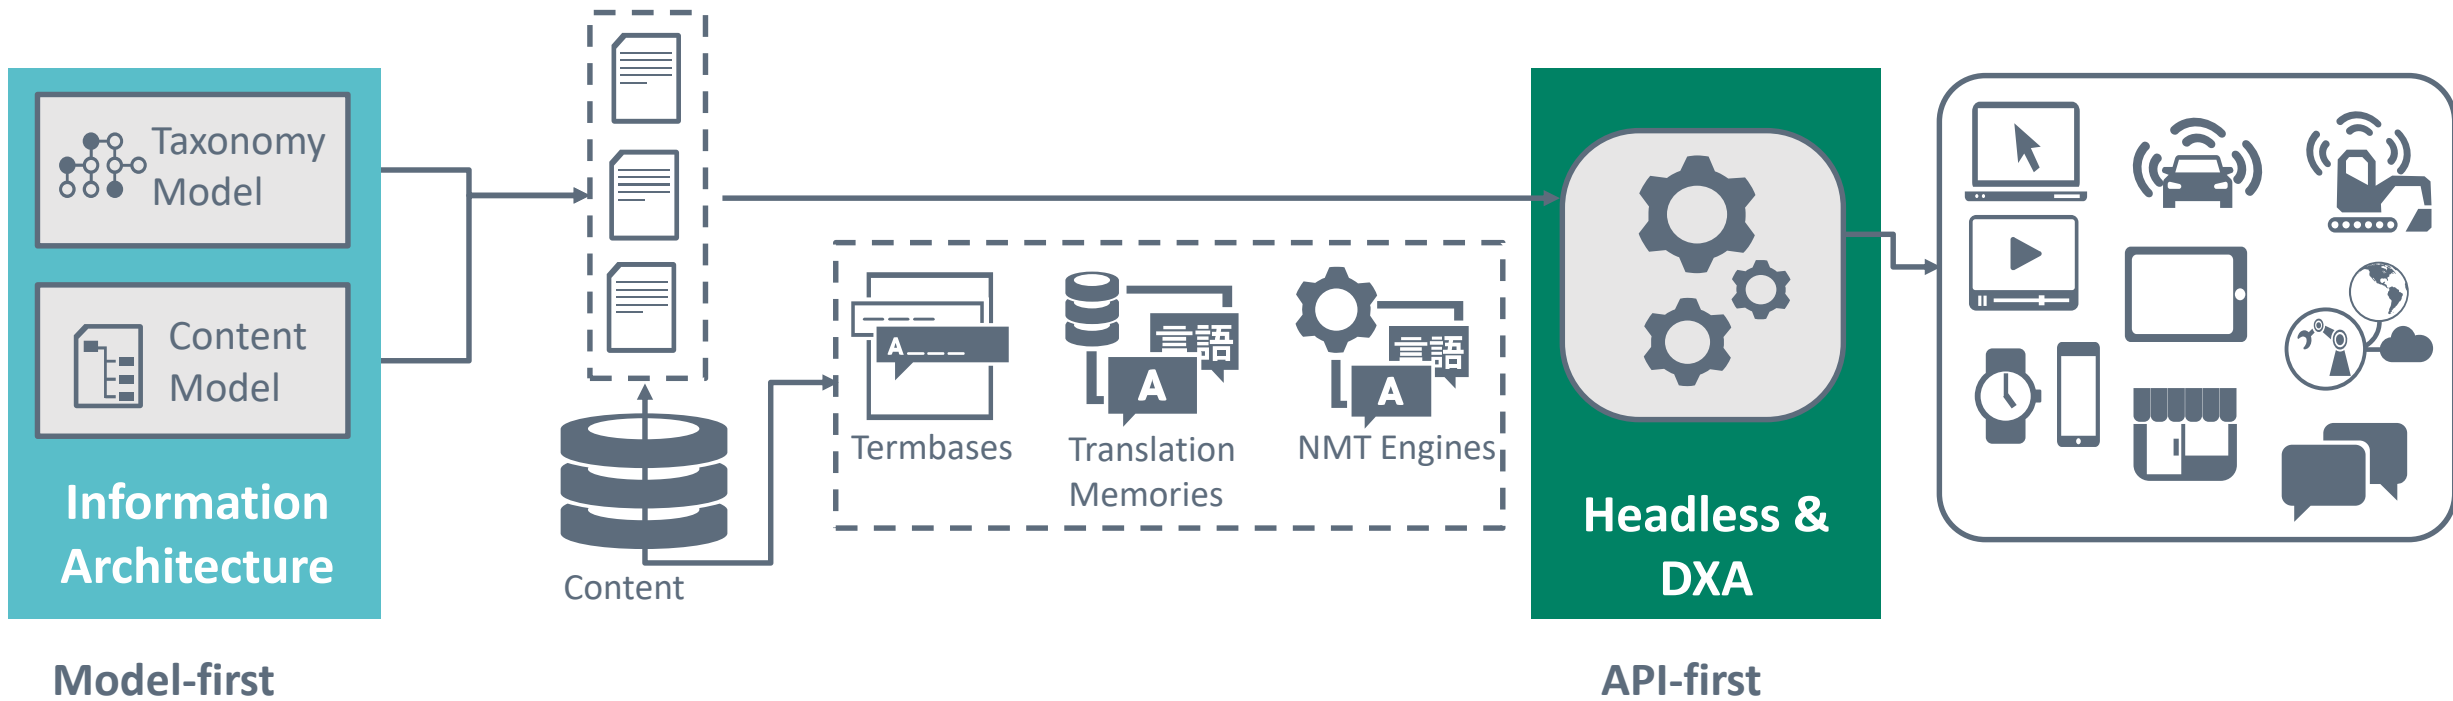

Accelerates by
automation and
integration

Leverages
knowledge with
Linguistic AI

How Digitalization impacts Content and Localization Mgmt

Digitalization Drivers

IoT with Smart Services

Voice Assistants & Chat Bots

Augmented & Virtual Reality

Product differentiation by Software

Create & Manage

- MicroContent – small & smart
- across enterprise disciplines & departments
- Rich-Media

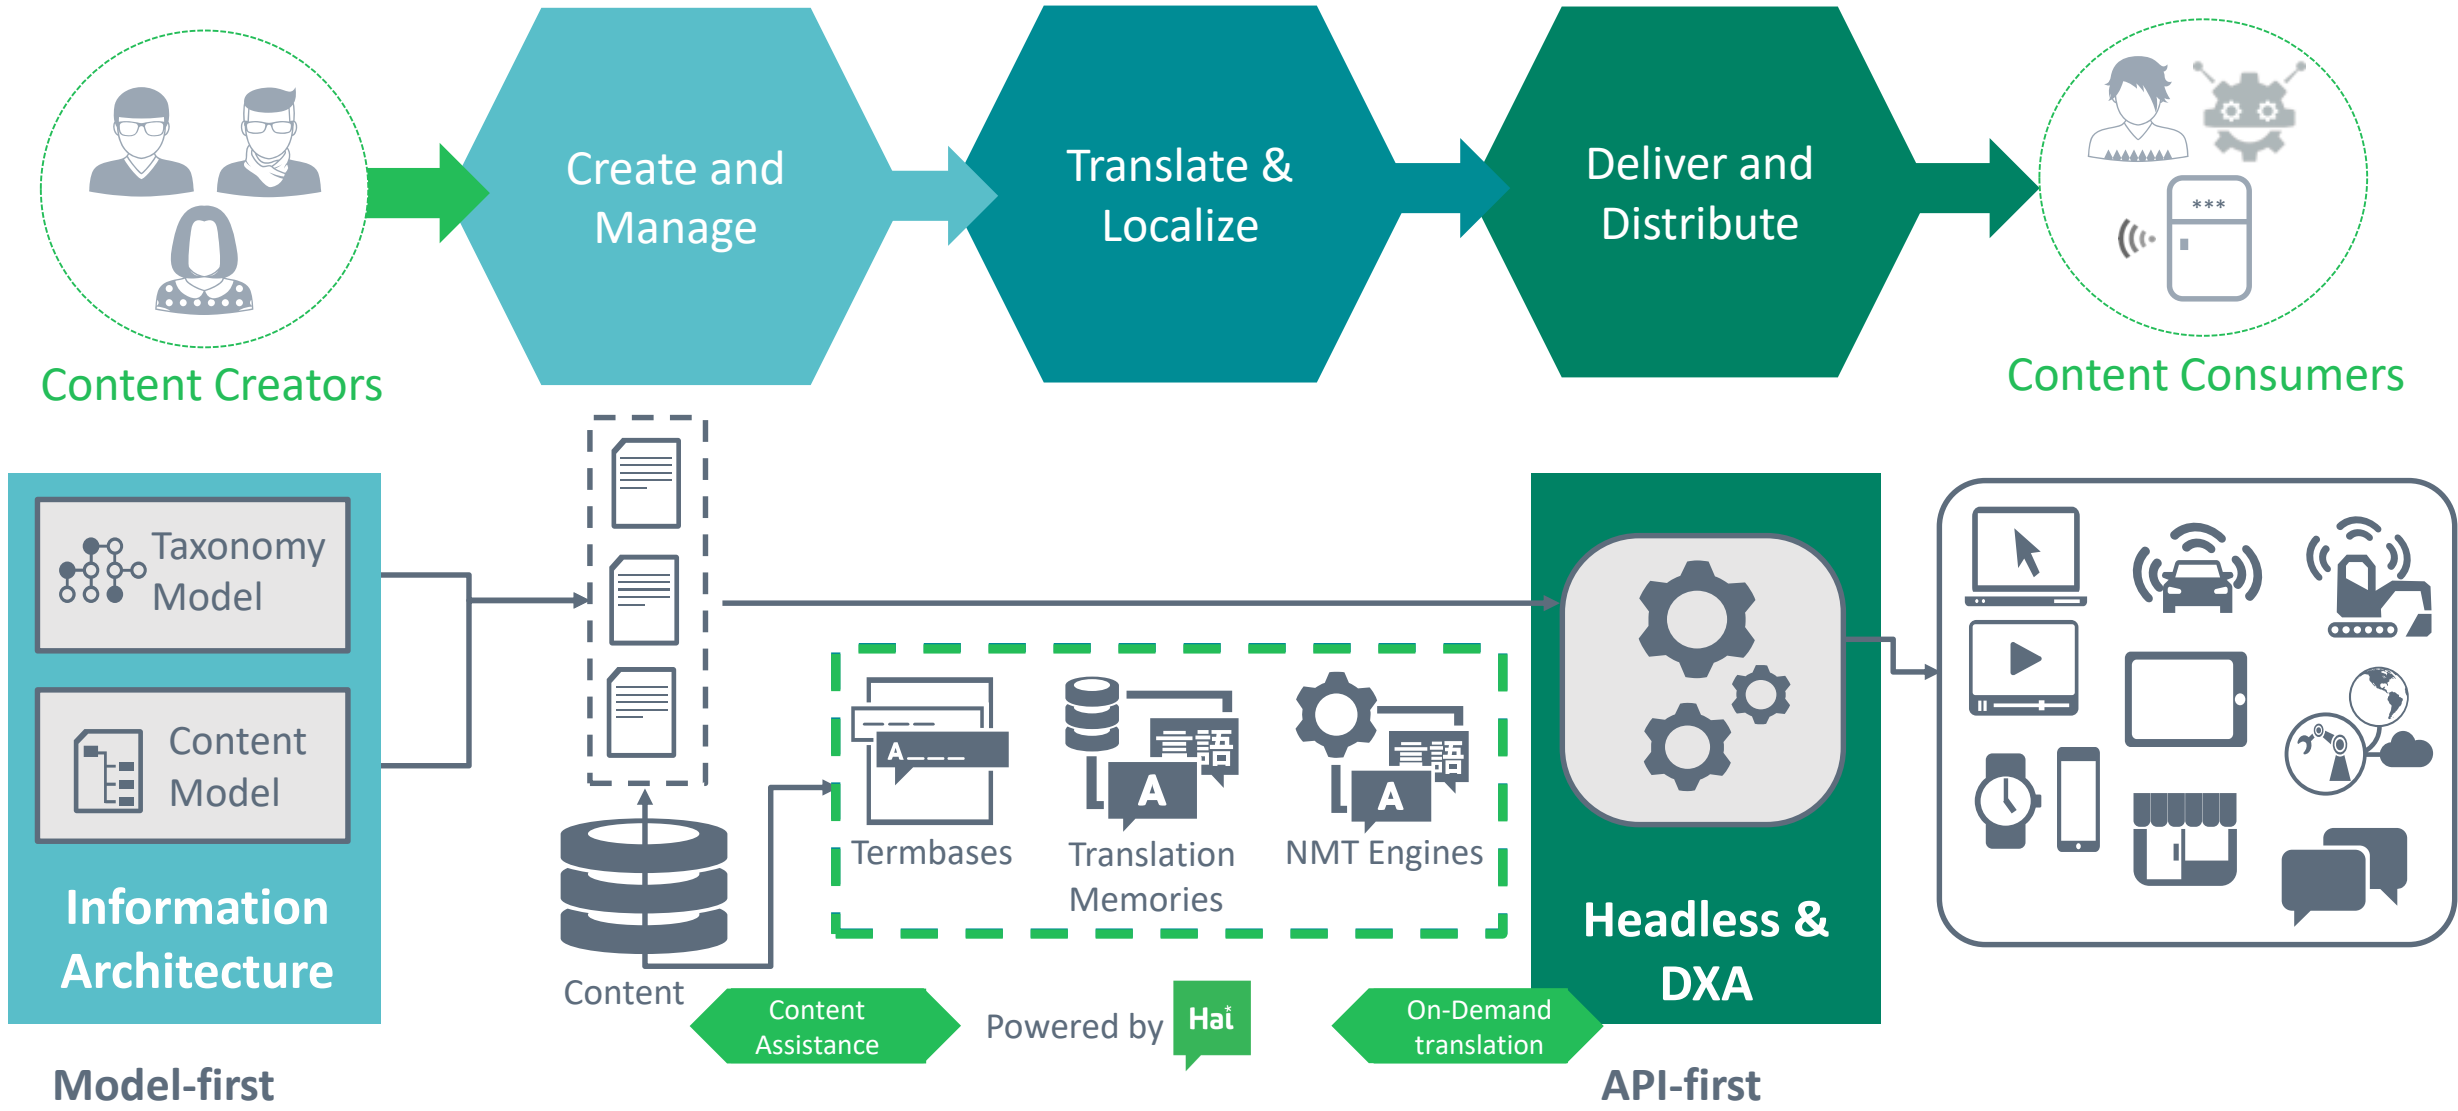

Translate & Localize

- Continuous Localization applying agile DevOps best practices

Deliver & Distribute

- shorter intervals & incrementals
- globally simultaneously
- synchronous across channels and touchpoints
- Mash-Up MarCom & TecDoc

“After understanding what AI can and can’t do, the next step for executives is incorporating it into their strategies. That means **understanding where value is created and what’s hard to copy**. The AI community is remarkably open, with most top researchers publishing and sharing ideas and even open-source code. In this world of open source, the scarce resources are therefore:

DATA

Among leading AI teams, many can likely replicate others’ software in, at most, 1–2 years. **But it is exceedingly difficult to get access to someone else’s data**. Thus data, rather than software, is the defensible barrier for many businesses.

TALENT

Simply downloading and “applying” open-source software to your data won’t work. AI needs to be customized to your business context and data. This is why there is currently a war for the scarce AI talent that can do this work.”

Andrew Ng

DOMAIN/CUSTOM ADAPTATION

Leverage existing Data assets for adaptation

With Linguistic AI these Assets can be leveraged enabling cost reductions, process acceleration and global collaboration.

Terminology and Translation
Memory Assets are a significant IP providing competitive advantage.

Adaptability – Adaptive LPs Protecting IP

Provides the ability to train
Neural engines, on premise,
without the need to share
data with any third party

Leveraging MT

- to build multilingual Chat Bots, Live Agents and Service Knowledge Bases
- to speed up communication and knowledge exchange across the sales and distribution chain

Partnerships and integrations for audio, video and image transcription into text e.g. with

Linguistic AI enables Workflow Assistance and Automation

- Extract keywords/metadata from content to assist Project Managers with decision making.
- “Dynamic workflows” which will be decided by Content Assistant output on which workflow to go through.
